

**SECOND RECORD OF *RHINOLOPHUS BEDDOMEI* IN EASTERN GHATS, INDIA**

**K. Thulsi Rao, C. Srinivasulu, R. Prudhvi Raj, S.M.M. Javed and I. Siva Rama Krishna**

*Main article in Zoos' Print Journal 19(4): 1446; Manuscript 1061; © Zoo Outreach Organisation*

**Image 1.** *The gravid Rhinolophus beddomei female collected at Nallamala Hills on 9 May 2002 (Coll. No: ERM/MC21). Photo by K. Thulsi Rao. Live animal photographed near Forest Rest House near Gundla Brahmeshwaram Metta Temple (15°39'N & 78°43'E) on the Gundla Brahmeshwaram Plateau in Gundla Brahmeshwaram Wildlife Sanctuary. Photographed at 1615 hrs after placing the animal on the tree branch. Camera - Digital Sony Mavica with flash.*

**Image 2.** *The characteristic shape of the sella allows for easy identification of Rhinolophus beddomei. This female is the second specimen of the species from the Eastern Ghats (Coll. No: ERM/MC21). Photo by K. Thulsi Rao.*
